

# Science

**Science** is the study of how the world works.

Learning about **earth, space, life,** and **physical science** will give your child a great basis for **understanding our world.** Your child will learn about recycling, healthy habits, their five senses, and much more.

*Try these fun activities at home or on the go!*

**Touch & Feel** Choose a few items from around that house or a few of your child's favorite things. Ask your child to close their eyes. Hand them one item at a time, and give them time to feel it. Can they guess the object? Try objects with different textures. For example, a soft teddy bear and then a smooth rock.

**Take a Walk** Take a walk together and talk about different things in your environment. Discuss which things are living and which are nonliving. Talk about what living things need.

**Adult** What do you see that is living?

**Child** The tree!

**Adult** You're right! Living things like the tree need water and sunlight to grow! What do you see that is nonliving?

**Child** Hmmm...the bench!

Your child will listen to a story about the plant life cycle of a sunflower seed.

Your child will create an environment with amphibians.

In this activity, your child will sing along to a song about fish.
